

Course: CCNA Semester: 2 nd term 2024/2025.	Lecturers: Assoc. Prof. Osama Elnahas, Dr. Nehal ElAzly Assistant: Eng Rania Helal, Eng. Israa Mohsen, Eng. Mariam, Eng. Hazem Hamdy
Tutorial 4: Physical Layer	

Answer the following questions:

Q1. Choose the correct Answer:

1	 is the measure of usable data transferred over a given period of time a. Latency b. Goodput c. Throughput d. Bandwidth
2	 is how the bit values, “1” and “0” are represented on the physical medium. a) Encoding b) Decoding c) Modulation d) Signaling
3	Throughput is the amount of time, including delays, for data to travel from one point to another a) True b) False
4	STP cables are shielded and protect against electromagnetic interference and UTP lacks the same protection against electromagnetic interference. a) True b) False
5	 is the measure of the transfer of bits across the media over a given period of time a) Bandwidth b) Latency c) Throughput d) Capacity
6	UTP cables are less prone to crosstalk and interference and STP cables are more prone to crosstalk and interference. a) True b) False
7	Which condition makes TCP preferred over UDP? a. When reliability is critical b. When dropped data is acceptable c. When low latency is optimal
8	 converts the stream of bits into a format recognizable by the next device in the network path. a) Signaling b) Decoding c) Encoding
9	What does digital bandwidth measure in a network? a) The size of data packets transmitted. b) The number of connections within a network. c) The amount of data transmitted per unit time.
10	What is one of the primary limitations associated with copper cabling in networks? a) High cost b) Difficult installation process c) Attenuation of electrical signals
11	How does copper cabling mitigate crosstalk? a) Using metallic shielding b) Increasing cable length c) Twisting opposing circuit pair wires
12	The method of signaling will vary based on the type of medium being used. a) True b) False
